

This CPD seminar entitles you to 1 formal CPD point. Please be aware you are required to manage your own CPD records. We will provide you with your participation certificate once you have attended the full seminar.

INNOVATION AND THE LATEST IN SUSTAINABLE BUILDING SOLUTIONS

- 1. How does using sustainable building materials help with improving health & safety for builders as well as the occupants?
- 2. What are some green trends embedded into the design and culture and why are they important?
- 3. Describe three ways that waste minimization can be achieved on a build
- 4. What are some of the latest new innovations in terms of green materials?

At the end of this panel, attendees will be able to:

- Outline the scale of the construction sector's contribution to environmental degradation, and more specifically to resource depletion, waste and carbon emissions.
- Explain the role that architects and designers can play in minimising these effects and helping to make the construction sector more sustainable.
- Define the term 'sustainable design' and explain the variables involved in achieving it.
- Explain the best ways for architects and designers to identify products and systems that are environmentally sustainable.

Competency Codes: Design: PC 10, PC 12, PC 28, PC 31
